

FOR RELEASE: July 8, 2015

Subject Line: IST Expands Distribution through Relationship with Solar Roof Dynamics.

IST partners with Solar Roof Dynamics to Offer Solar Shingle Roof Systems in CA

Sacramento, CA – Sleek, roof-integrated solar shingle roof systems will soon become widely available in California as Integrated Solar Technology, LLC (IST) announces its most recent strategic distribution partnership with Solar Roof Dynamics, LLC (SRD), of Davis, California. IST, an advanced solar product and manufacturing company based in New York, will partner with SRD to distribute its SunTegra™ Solar Roof Systems throughout California, which will help support its efforts to enter and compete in the solar market and expand SunTegra's availability in the roofing industry. SRD is a premier distributor of solar products dedicated to transforming the traditional roofing industry and empowering roofing contractors to become competitive solar contractors.

“Solar Roof Dynamics offers IST a unique opportunity to work directly with roofing contractors as they enter the solar market. We are delighted to be working with Solar Roof Dynamics, an innovative distribution company specializing in helping roofing contractors become competent solar contractors. It's a natural fit,” said IST's Business Development Manager, Deborah Lewis. “By working together, we can provide roofing contractors an attractive and cost-effective roof-integrated solar solution for their customers.”

“We are committed to maintaining a portfolio of best-in-class solar solutions for the roofing industry,” explains SRD's Founder and CEO, Aaron Nitzkin. “IST's SunTegra line of products fills a needed void in the marketplace for aesthetically appealing and truly integrated solar roofing solutions. They are well designed products, and we are excited to assist contractors and homeowners looking for integrated solar options.”

IST's SunTegra™ Shingle and SunTegra™ Tile solar roof systems are attached directly to roof decking or battens and function both as a solar panel and as a roofing material. Both products are UL 1703 certified and carry a Class A fire rating.

About Integrated Solar Technology, LLC. and SunTegra™

Founded by Oliver Koehler in early 2013, Integrated Solar Technology (IST) is dedicated to offering innovative product solutions to the solar, roofing, and construction industries. After almost two years of research and product development, IST officially launched its proprietary SunTegra™ Tile and SunTegra™ Shingle solar modules across the United States, obtained UL Certifications, and began manufacturing the SunTegra™ modules on a commercial scale. The SunTegra™ modules generate clean electricity from the

sun, look great, are simple to install, and provide more cost savings than conventional solar electric systems. IST partners with solar integrators, roofers, and contractors across the United States interested in offering a unique, attractive solar roof system to their residential and commercial customers. For more information, see www.ist-solar.com.

About Solar Roof Dynamics

Solar Roof Dynamics is a premier distributor of solar products. Combining extensive solar and roofing expertise, a strong commitment to innovation, and industry-leading products and services, Solar Roof Dynamics helps roofing contractors integrate solar into their business quickly and easily so their customers can enjoy the best possible solar installation. For more information, see www.solarroofdynamics.com.
